DETAILED ACTION

Specification

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-8 are rejected under 35 U.S.C. 102(e) as being anticipated by Masuda et al. U.S. Patent no. 6,678,474.

Regarding claims 1, 3 and 4, Masuda discloses a network node for an optical shared protection scheme network (figure 3) each network node (for example NODE 1 that includes router 12 or 13, col. 6, line 67) being arranged to provide optical signals to at least two transmission paths (figure 3a, wavelength path), the node comprising a link aggregation router 12 having at least two ports (see figure 3 (a)) a first port connected to a first path (e.g., equivalent to a working transmission path) and a second port connected to second path (e.g., equivalent to a shared protection transmission path) such that in failure free operation both the working transmission path and the shared protection path carry traffic (col. 5, lines 44-61).

Regarding claim 2, Masuda further discloses the ring optical network (figures 3 and 8) wherein an optical switching device (figure 10 element 212) arranged to switch the optical signals from working path to spare paths in either direction around the ring.

Regarding claims 5 and 6, Masuda further discloses the shared protection scheme is an optical shared protection ring (figures 3(a) and 3(b)) and wherein an optical switching device (figure 10 element 212) arranged to switch the optical signals from working path to spare paths in either direction around the ring.

Regarding claims 7 and 8, Masuda further discloses a processing unit 207 and the memory 213 (e.g., it is inherently that the processing unit 207 is operated based on a computer program that stored on a machine readable medium) arranged to control the transmission packet.

Response to Arguments

3. Applicant's arguments with respect to claims 1-8 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dzung D Tran whose telephone number is (571) 272-3025. The examiner can normally be reached on 9:00 AM - 7:00 PM.
